Subject: [EXTERNAL] Re: Tub Spout Diverters: Draft high level project plan

Perhaps we can replace our proposal of 0 gpm with a statement similar to this from CEC's presentation: "Staff is considering reducing the tub spout diverter leakage rate below 0.01 gpm when new and below 0.05 gpm after 15,000 cycles of diverting."

I want to have a primary proposed code language change such as that since it will:

- contain the scope of this two month project
- focus on a straight forward code change in alignment with CEC goals
- yield cost effective savings

Good plan and good improvements, thank you.

I have one major concern, and that is the approach of actually proposing a change, and then proving that it's ok . IMHO we should research the cost-effectiveness and market impact of any suggestions by the CEC open ended, and make whatever recommendations areappropriate once we have a body of research. The recommendation may include to not do anything, or to do something different than the proposed changes. As is, the research would be biased with a particular outcome desired. Thats not good science. See also the wording in my letter of support from earlier.

Thank you

Thanks, Daniela. That looks good, but I'll wait for Marc's input before I incorporate that to avoid confusion.

Subject: [EXTERNAL] Tub Spout Diverters: Draft high level project plan

Hi Daniela & Marc,

Here attached is my draft of our high level project plan. Please let me know if you have any comments.

Daniela, please note that I'm sharing this with you and Marc concurrently in the interest of time.
