NRDC-1	BayREN	Res	General (no tracker)	<ul style="list-style-type: none"> • Add additional data consistent with the other PAs if BayREN has access to such information (e.g., energy use, savings, end uses, income participation, etc.) • Include citations throughout to support observations, barriers, and solutions • Label tables • P.2.5 – R3, what are “complementary services?” • It’s a bit challenging to go back and forth in the document to see what strategies and tactics are being used. Suggest exploring a different table configuration to make it easier for the reader (e.g., maybe add a column for tactics in addition to strategies and cut and paste some of the description vs. summarize?). Things to consider. • Figure 6 – how does the data compare to the potential? • P.2.26 doesn’t have a mapping to the strategies, only tactics • There are a number of items on the checklist that I don’t see (e.g., EM&V summary, comparison section to previous cycle, legislation table, etc.). Presume it’ll be in the final. • On p.2.4 there is a reference to more EMV details on p.2.36 but there isn’t any additional information on 2.36. • P.2.35 – what will BayREN do to leverage the offerings? Requirement for cross-pollination? Co-MEO? Co-payments?
