Thanks Bo

I don't think a lab test using a flow meter vs. a graduated cylinder adds value. If you are trying to compare accuracy of instrumentation that's better done on paper using the specs of different available flow meters and cylinders that are all "legal" according to the test procedure (or not illegal for that matter). You can then do a worst-case calculation on paper, and figure out how bad the real leakage may be vs. the reported measurement. That should then inform an improvement to the test procedure.

Also, use "we will" or "we plan to" instead of "we hope to" and avoid empty terms like "in any case", for more precision and assertiveness overall.

Thanks

Hi Daniela & Marc,

Here attached are my updates to the talking points with track changes on. Please let me know if you have any comments or questions.

I'll email you both our draft test plan tomorrow afternoon.
