

Southern California Edison
SCE EE Business Plan A.17-01-013

DATA REQUEST SET A.17-01-013-CEE-SCE-002

To: CEE

Prepared by: Joni Key

Title: Project Manager

Dated: 05/18/2017

Question 44b:

The responses to Data Request Questions 16, 17 and 18 state that the “risk factors for degradation of the performance of energy efficiency (EE) measures are factored into the installation rates found in workpapers ... and subsequently updated in DEER as Gross Savings Installation Adjustments (GSIA). Energy savings (with deductions for installation rates) are one input into cost-effectiveness calculations, so these installation rate reductions are reflected in cost effectiveness calculations as well.”

b. Please identify specifically each energy efficiency measure whose energy savings are discounted due to the risk of lost energy savings due to poor or improper installation. This question does not encompass reductions for incentives that were found to not actually have been installed.

Response to Question 44b:

SCE does not have any EE measures for which energy savings are adjusted to account for poor or improper installation.
